

APPLE VISION PRO PURCHASING GUIDE

Thank you for your interest in purchasing Apple Vision Pro through Mac Business Solutions.

Apple Vision Pro integrates incredibly advanced technology into an elegant, compact form—delivering an amazing and personalized experience for your employees. Because each Apple Vision Pro is customized for every employee, it's important

that the ordering process is clear and easy to follow. The below instructions are provided to help you place orders with us. This information will ensure that every Apple Vision Pro is personalized for each of your intended employees.

ORDERING PROCESS

We're available to help set up how to purchase Apple Vision Pro for your business. The steps below will guide you through the ordering process for buying directly from us.

Step 1: Get Employees Properly Fitted

Every Apple Vision Pro delivers a personalized fit. So each employee will need to go through a customized fitting process to match the contours of their face and head for the best possible Apple Vision Pro experience.

1. Your employees should download the **Apple Vision Pro Fit** app from the App Store, and then complete the fitting process in the app.
2. Once employees complete the required steps using the Apple Vision Pro Fit app—including any specialized Zeiss Optical Insert needs—an email with their personalized fit and part number will be generated based on their specific measurements.

Step 2: Collect Part Numbers and Storage Sizes for Employee Orders

After your employees complete the fitting process and receive their personalized emails from Apple, you should collect that information from them, including a list that states each individualized part number.

1. Apple Vision Pro is available in 256GB, 512GB, and 1TB, so your employees can select their preferred memory capacity in the Apple Vision Pro Fit app. Part numbers for alternative storage options are also included in the Fit summary email that's sent to each employee once they've completed the fitting process in the app.
2. If your employees need specific accessories, they should be ordered separately—and also tracked. Accessory part numbers are noted in the last section of the personalized Fit email. Keep in mind that these accessory part numbers are specific to each employee.
3. You should track and maintain a list of individual employee part numbers and designated storage sizes to ensure that the correct Apple Vision Pro device is properly distributed to each of your employees.

Step 3: Place your order

After your employees have completed their personalized fit information and each part number has been collected, request access to the Apple Vision Pro store via email to avp@mbsdirect.com. Once you receive the credentials log in to our E-commerce portal, enter the the part numbers and the quantities for each Apple Vision Pro device, then add to the cart.

Step 4: Monitor the order status

We will send you an order acknowledgement email with the estimated ship date. You'll also receive a shipment notification email when your product ships. To find your order status, you can look at the pending order list in your E-commerce portal. If you still have questions about ordering, contact us at avp@mbsdirect.com

About Mac Business Solutions

Mac Business Solutions has been an Authorized Apple Reseller and an Authorized Apple Service Provider since 1992.

MBS is one of only a handful of Apple Partners officially authorized by Apple to sell directly to the U.S. Government. We have done business with numerous government agencies, and have shipped Apple and Apple-related products to government and related entities across the United States and around the world.

Likewise, we cater to the private sector, large and small businesses and creative agencies. Our business goes beyond just selling units, we create systems that are capable of handling what the customer requires. MBS specializes in mobile deployment management systems

employing software and hardware solutions from Apple and related software and hardware solutions to effectively integrate new devices into existing environments.

Whether it is a solution for commercial real estate agents around the country or an iPad based point of sale system for a small business, MBS is equipped to generate Apple solutions that can handle the requirements of the customer.

Since day one, our primary goal was to develop solutions to meet our customers' needs. Despite exponential growth and a dynamic market segment, that primary goal has held true today. MBS has always put a priority towards exceeding customer expectations, no matter the size of the order or the customer.
