

Protect Apple endpoints against Mac-specific threats

Gain unprecedented visibility into macOS.

The corporate security landscape is changing, and one size fits all security tools fail to provide the level of visibility needed to thwart today's sophisticated enterprise threats.

Enter Jamf Protect – built for Mac to protect Mac.

Developed natively on Apple's architecture, Jamf Protect provides deep visibility into the activities and threats on macOS endpoints. With Jamf Protect's dashboards, real-time alerts, and extensive reporting on built-in macOS security frameworks like XProtect, Gatekeeper and MRT, you'll be the first to know when suspicious activities occur on your Apple computers.

"Jamf Protect was easy for us to deploy with Jamf Pro. It exposed us to a part of the Mac framework that we couldn't see before. It's been very actionable and easy to understand"

— Dave McIntyre, Chief Information Technology Officer
Build America Mutual

Jamf Protect solves the unique challenges of macOS security:

Detect and hunt Mac-specific threats

Focus on understanding macOS activities, including those threats and attacks unique to Apple's architecture. Jamf's dedicated macOS security research provides deeper insights compared to Windows-first products.

Enterprise visibility into native Apple security tools

Bring Apple's privacy commitment to the enterprise, by providing visibility of macOS' built-in security tools like XProtect and Gatekeeper that protect users from common malware.

Controlled isolation and remediation through Jamf Pro

Manage and automate isolation, remediation, and cleanup of devices under attack with the same industry leading Jamf Pro that IT organizations already use to manage their macOS computers.

Simple Jamf Protect management with Jamf Pro

Simplify security tool management by leveraging the same industry leading Jamf Pro that IT organizations already use to manage their macOS computers.

Designed for macOS to minimize end user impact

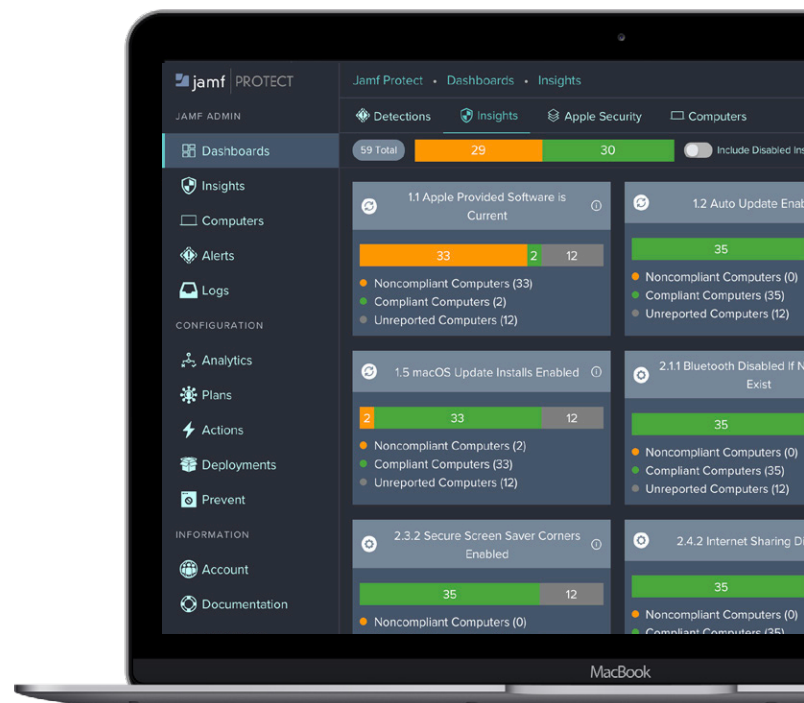

Keep employees productive, collaborative, and as engaged as Apple users expect while gaining insights necessary for IT and Security teams.

Endpoint compliance assessment

Get quick insight into the security posture and endpoint configuration of all managed macOS endpoints.

Control your security data

Gain granular control over what data is collected by Jamf Protect, what is sent to Jamf's Cloud and/or sent directly into your existing SIEM.

Unprecedented visibility. Real-time action. 100% Mac.

Jamf Protect is available to commercial organizations within the U.S.
